Current Stage

Dash is a general payment token with the functions of instant and private transfers. The project implements the above two functions by adding the master node network. At present, the total market value of Dash ranks 14th among all encrypted tokens, two places lower than the last observation, and ranks 5th in the general payment token industry. The Dash ecosystem is good and currently, more than 4,500 merchants around the world support Dash as a means of payment. A few days ago, Dash passed the stress test of a daily transfer of 3,500,000 and the network did not appear to be congested.

Dash 2018 Performance

- 1 KFC in Venezuela clarifies that Dash is not supported as a means of payment
A few days ago, the head of Dash's merchant network announced that KFC stores in Venezuela would accept Dash as a means of payment. On December 10, 2018, Venezuela's KFC CEO refuted this announcement and stated that KFC stores in Venezuela would not support Dash payments.
- 2 **✓ Completed**
August 2, 2018, Kripto Mobile Corporation (KRIP) released mobile phone with built-in Dash transfer function
KRIP, which allows users to transfer DASH via SMS, has sold 66,000 phones, of which 53,000 have been sold in Venezuela.
- 3 In December 2018, DashCore 0.13.0 released
✓ Completed
The release of DashCore 0.13.0 is an important part of the Dash Evolution plan 1.0, which includes the implementation of DAP architecture and distributed API. The Evolution program aims to promote the widespread acceptance and use of Dash as a conventional means of payment, which encompasses the IPFS distributed storage protocol and other technologies.

Risk

DASH is a cryptocurrency token with instant payment and private payment features. It uses a PoW consensus mechanism through a X11 algorithm and a Master Node structure to achieve an enhanced level of transaction speed, hash power decentralization, and anonymity. Although DASH is one of the most popular and widely-used cryptocurrencies, it is by far outperformed by top payment tokens.

Summary

Team

CEO, Ryan Taylor

- Joined DASH in mid-2014 and worked as DASH's Director of Finance
- Previously a hedge fund analyst and an Associate Partner at McKinsey & Co.
- MBA, Columbia Business School, Columbia University

CTO, Bob Carroll

- Founder of 808 Partners, Inc. & Mutual - LDS Dating
- 2012 - 2017: CTO of Everspring Inc.
- 2012 - 2017: CIO of Education Management Corporation
- 1998 - 2006: CIO of Apollo Education Group

Project

DASH Token

DASH is a cryptocurrency focusing on the payment industry and operates through a Decentralized Autonomous Organization (DAO). Its source code is forked from Bitcoin, so it also uses a PoW consensus mechanism, but with its hashing algorithm changed to X11.

InstantSend & PrivateSend

InstantSend is a feature of the Dash protocol that utilizes transaction locking and a masternode consensus algorithm to facilitate instantaneous transactions on the Dash blockchain.

PrivateSend is a decentralized coin mixer feature on the Dash protocol that is designed to enhance user financial privacy by obscuring the origin of funds.

Both InstantSend and PrivateSend are made possible by DASH's Master Node system, design to give DASH enhanced transaction speed and anonymity.

Ecosystem

Market Cap: \$ 1,516,740,938

Ranking: 13

Popularity:

Twitter currently followed by over 313,000 followers and Facebook 38,387

598 ATMs supporting DASH worldwide

120 E-Commerce Merchants supporting DASH are published on DASH website

Supporting Exchanges:

ZB.COM, Huobi, LBank, HitBTC, Exrates, Binance, Bitfinex, Bit-Z, YoBit, OKEx, Trade By Trade, LocalTrade, Coinsuper, Bitinka, Sistemkoin, Kraken, Bithumb, Poloniex etc.

AAA: The technical foundation is extremely solid and project risk is extremely low.

AA: The technical foundation is very solid and project risk is very low.

A: The technical foundation is solid and project risk is relatively low.

BBB: Technical feasibility is very good and project risk is controllable.

BB: Technical feasibility is good and the risk of the project is moderately controllable.

B: Technical feasibility is moderate and project risk is limited to a controllable extent.

CCC: The technical foundation or idea has certain problems and the project has relatively large risks.

CC: The technical foundation or idea has considerable problems and the project carries large risks.

C: The technical foundation or idea has substantial problems and the project suffers from extremely large risks.

D: The project is riddled with problems and carries an extremely high risk of failure.
