Risk

BitTorrent is a distributed communication protocol that facilitates the transfer of files utilizing a peer to peer network. BTT is a TRC-10 token based on TRON network that serves as the incentive exchange medium within BitTorrent ecosystem. According to official statistics, there are over 100 million monthly active users using BitTorrent which leads BitTorrent to the largest DApp around the world regarding to user volume. However, the stability of the network still need further testing due to the migration from its previous technical infrastructure to the blockchain network. Besides, the improvements on network efficiency based on the newly designed incentive mechanism is to be verified as well.

Team

CEO, Justin Sun

- Apr 2017- Present: CEO of TRON Foundation
- Jun 2018 - Present: CEO of BitTorrent, Inc.
- 2011 - 2013: MA in Political Economy, University of Pennsylvania
- 2007 - 2011: BA in History, Peking University

COO, Jordy Berson

- May 2018 - Present: COO of BitTorrent, Inc.
- Dec 2009 - Oct 2010: Manager and acting director of Consumer Product Management of Check Point Software Technologies

Project

BitTorrent is a distributed communication protocol invented by Bram Cohen in 2001. It employs barter economy enables users to trade pieces of the file they each desire to download that facilitate the file sharing network. The network suffers from long term inefficiency of their existing swarm system and proposed to extend the lifespan of the swarm in collaboration with TRON platform in recent project.

Token Economy

BitTorrent is introducing a TRON TRC-10 cryptographic token called BitTorrent (BTT) to act as a general purpose mechanism for transacting in computing resources shared between BitTorrent clients and any other participating service requesters and service providers

Exchanges: Binance

AAA: The technical foundation is extremely solid and project risk is extremely low.

AA: The technical foundation is very solid and project risk is very low.

A: The technical foundation is solid and project risk is relatively low.

BBB: Technical feasibility is very good and project risk is controllable.

BB: Technical feasibility is good and the risk of the project is moderately controllable.

B: Technical feasibility is moderate and project risk is limited to a controllable extent.

CCC: The technical foundation or idea has certain problems and the project has relatively large risks.

CC: The technical foundation or idea has considerable problems and the project carries large risks.

C: The technical foundation or idea has substantial problems and the project suffers from extremely large risks.

D: The project is riddled with problems and carries an extremely high risk of failure.
